They agree on 9 of 10 picks (green) and split on 1 (amber). Bold = 70%+. Grey = no pick. QBs: each team's expected starter; a game is a no-pick when the starting QB is out or unconfirmed, and any pick whose starting QB changes before kickoff is dropped.

**How far to trust them (NFL, same 887 games, 2022-2025).** Engine 64.0% of winners, framework 62.6%, closing-line favorite 68.7%. One week is a small sample.

# Your team notes: how they're doing

Notes you set by hand, case by case. A note moves the team's predicted margin by its points in both models, for games kicking off after you set it, and runs out 3 weeks after your last read on that team unless you renew it. In force now: none.

| Team | Your note | Compared with | Graded games | Team record | Model alone expected | Points per game vs model alone | Win chances, Brier (with / without note) | Picks the note changed | So far |
|---|---|---|---|---|---|---|---|---|---|
| **Rams** | Unreliable -3.0<br>since Oct 12; 1 read; cleared | Engine | 0 | No graded games yet | | | | | |
| | | Framework | 0 | No graded games yet | | | | | |
| **Bills** | Max effort +1.5<br>since Oct 12; 1 read; cleared | Engine | 0 | No graded games yet | | | | | |
| | | Framework | 0 | No graded games yet | | | | | |

Every graded pick that involved a noted team. **Model alone expected**: the wins the model predicted without your note. **Points per game vs model alone**: how much better (+) or worse (-) the team did than the model's predicted margin; an unreliable note is right when this is negative and a max-effort note when it's positive, ideally by about the note's points. **Brier**: how close the win chances were to what happened, lower is better. **Luck**: how far results land from the model's expectation by chance alone 95% of the time over that many games; until a number gets outside it, one good or bad stretch can't prove a note either way.

Engine: the locked college method (NFL: with the approved NFL settings), rating every offense and defense on EPA and success rate, adjusted for opponents. Framework: your Prompt Football criteria (trenches 25%, net efficiency 25%, passing 20%, situational 15%, high leverage 15%) scored from this season's play-by-play only. Team notes (NFL): your own calls, set by hand and added on top of both models' numbers. Files: results/ in the sports-engines repo. Report made 10.17.2026 1:05 AM Phoenix time.
