Amber rows: the two models picked different teams. A tie is graded as a tie. Percentages are each model's win chance for its pick.

Off the record: no-pick games. The team each model would have taken in the grey rows went: engine 1-1, framework 1-1. These never count in either model's record; they're shown so you can see whether holding these games back pays off (running total: results/nopick_leans.py).

Against the betting market (grading only, never an input). The closing-line favorite went 8-4 on the engine's 12 graded games. Accuracy of the win chances (Brier, lower is better): engine 0.295, closing line 0.246. The engine picked against the market favorite 3 times and went 0-3.
