Amber rows: the two models picked different teams. A tie is graded as a tie. Percentages are each model's win chance for its pick.

Off the record: no-pick games. The team each model would have taken in the grey rows went: engine 1-2, framework 1-2. These never count in either model's record; they're shown so you can see whether holding these games back pays off (running total: results/nopick_leans.py).

Against the betting market (grading only, never an input). The closing-line favorite went 5-6 on the engine's 11 graded games. Accuracy of the win chances (Brier, lower is better): engine 0.282, closing line 0.263. The engine picked against the market favorite 2 times and went 1-1.

They agree on 5 of 7 picks (green) and split on 2 (amber). Bold = 70%+. Grey = no pick; the italic "off record" line is the team each model would take and its win chance, never counted in the record. No pick: the starting QB is out or unconfirmed, or a team lacks enough play-by-play this season.

How far to trust them (college, same games). 2025: 580 games, engine 70.9%, framework 67.9%; 2026: 142 games, engine 67.6%, framework 65.5%.

Engine: the locked college method (NFL: with the approved NFL settings), rating every offense and defense on EPA and success rate, adjusted for opponents. Framework: your Prompt Football criteria (trenches 25%, net efficiency 25%, passing 20%, situational 15%, high leverage 15%) scored from this season's play-by-play only.
