Against the betting market (grading only, never an input). The closing-line favorite went 9-1-1 on the engine's 11 graded games. Accuracy of the win chances (Brier, lower is better): engine 0.184, closing line 0.136. The engine picked against the market favorite 3 times and went 0-3.

Still to play. Bills at Rams, Monday 5:15 PM: both models picked the Rams (engine 75%, framework 53%).

How far to trust them (NFL, same 887 games, 2022-2025). Engine 64.0% of winners, framework 62.6%, closing-line favorite 68.7%. Week 5 went the framework's way (above), but one week is a small sample.

Missing data, so no pick. Bears at Falcons: Caleb Williams (hamstring) has no Week 6 status yet. Ravens at Browns: Lamar Jackson missed Week 5 and has no Week 6 status. Steelers at Buccaneers: Baker Mayfield (thumb) has been out since Sep 28 and his return isn't confirmed.

The college framework, tested. Replaying 2022-2025 week by week, it picked 1523-720 (67.9%). On the same games as the engine: 2025, 580 games, engine 70.9%, framework 67.9%; 2026 so far, 142 games, engine 67.6%, framework 65.5%. In college the engine has been the more accurate of the two.

Same five criteria and weights as your NFL version. Where the college data differs: pressure is sacks only (no QB-hit data), passing uses all dropbacks (no blitz charting), scrambles count as runs, overtime drives are left out of red-zone trips, and home field (2.45 points) comes from conference games, because non-conference games are mostly strong teams hosting weak ones.

Engine: the locked college method (NFL: with the approved NFL settings), rating every offense and defense on EPA and success rate, adjusted for opponents. Framework: your Prompt Football criteria (trenches 25%, net efficiency 25%, passing 20%, situational 15%, high leverage 15%) scored from this season's play-by-play only. EPA = expected points added per play. Files: results/ in the sports-engines repo.
